The Maarif Training Academy (**MTA**) is a dedicated educator development platform designed to meet the evolving needs of Maarif schools across the Kingdom. Built with a focus on structured learning, measurable performance improvement, and long-term institutional scalability, this platform is both practical and future-ready.

It supports educators across all roles — from classroom teachers to school leaders — and provides them with access to structured professional learning pathways, certification, and collaboration opportunities, all aligned to Maarif's educational frameworks and Vision 2030 objectives.

Key Platform Capabilities and Institutional Value

Structured Role-Based Learning

Each educator is assigned a clearly mapped learning pathway based on their teaching role, subject, and experience. These are aligned to Maarif's internal performance rubrics and professional standards.

Multi-Modal Training Delivery

The platform supports Instructor-Led Trainings (ILT), Virtual Instructor-Led Trainings (VILT), and Self-Paced modules — allowing flexible access without compromising instructional quality.

Certification and Competency Tracking

Certification is issued only after assessments, project work, and classroom application are verified. Progress can be tracked by educators, school heads, and cluster leaders through visual dashboards.

Internal Trainer Development

The platform includes workflows to identify, develop, and certify Maarif's internal educators as School-Based Trainers and Regional Lead Instructors, reducing reliance on external vendors and enabling sustainable delivery.

Performance Management and Succession Planning

Insights from the system can be integrated into Maarif's performance evaluation and leadership readiness processes — helping identify high-potential educators, track skill development, and inform succession plans.

Collaboration and Knowledge Exchange

Subject-specific communities, school-based learning groups, and a shared resource library enable cross-campus collaboration and the sharing of lesson strategies, research, and innovations.

Analytics and Reporting

A centralized dashboard offers Maarif HQ and school leaders' full visibility over participation, certification rates, training ROI, and talent pipeline readiness across all branches.

Compliance and Accessibility

The platform is available in both Arabic and English, with all onboarding, training, and support materials mirrored across languages. It supports cloud deployment, SIS/HRMS integrations (e.g., PowerSchool), and complies with Saudi education data policies.

1. INTRODUCTION

Designed for Scale, Quality, and Institutional Impact

Built on an Instructor-Led Training (ILT)–First Approach, the Academy ensures human connection, mentorship, and contextual engagement remain central to learning. This is blended with Virtual Instructor-Led Training (VILT) and Self-Paced modules, offering a complete spectrum of access models — across regions, campuses, and educator schedules.

The Academy is accessible in both Arabic and English, and reflects the cultural, instructional, and regulatory needs of education in Saudi Arabia.

Two Core Transformational Objectives

1) Empowering Every Educator with Structured, Role-Based Professional Development

The Academy equips every educator with:

- ↳ Competency-Mapped Learning Pathways, aligned to Maarif's internal teaching and evaluation frameworks.
- ↳ AI-Driven Personalization, adapting course recommendations based on role, subject, experience, and institutional goals.
- ↳ Integrated Certification and Assessment, including rubrics, quizzes, classroom observations, and 360° feedback.
- ↳ Performance Review Linkages, enabling alignment between training participation and formal evaluation cycles.
- ↳ Mobile-First Access, ensuring flexibility in learning schedules and formats.

As a result, educators across all Maarif schools receive structured, meaningful development — with clarity on where they are, what they need to achieve, and how they will get there.

2) Developing Internal Trainers and Academic Leaders Across Campuses

The Academy fosters an internal network of professional learning by:

- Creating a School-Based Trainer Certification Model to develop instructional capacity within schools.
- Offering a path to Regional Certified Trainers or Cluster Instructional Leads, strengthening cross-campus delivery and consistency.
- Supporting a Sustainable Talent Pipeline for roles such as academic coordinators, department heads, and future school leaders.
- Enabling Institutional Self-Reliance, reducing dependence on external trainers over time.

As a result, Maarif cultivates in-house instructional leadership that scales with the group's growth — supporting professional development from within, with consistency and cultural relevance.

Institutional Benefits for Maarif

Organizational Objective	How the Academy Supports It
Educator Performance Management	Training records and competency achievements feed directly into educator appraisal systems.
Succession Planning	Readiness indicators, certifications, and leadership engagement data inform future leadership selections.
Strategic Academic Planning	Dashboards offer visibility on progress, training gaps, and alignment with school-wide goals.
Cross-School Knowledge Sharing	Collaboration tools, communities of practice, and trainer forums promote innovation and best-practice exchange.
Regulatory Readiness	System design complies with Saudi educational standards, including data protection and training accreditation frameworks.

Platform Integration and Technical Compatibility

The Academy is designed to seamlessly integrate with existing Maarif systems to ensure a unified, low-friction operational environment:

Student Information Systems (SIS) such as PowerSchool

— sync teacher data, training records, and evaluations.

HR Platforms and Performance Systems

— transfer training completion and competency metrics to appraisal workflows.

Assessment & Feedback Engines

— plug-in architecture to link with external evaluation tools and observation checklists.

This reduces duplication, simplifies data access, and supports holistic performance tracking.

Government and Regulatory Compliance

The Academy is fully aligned with Saudi Arabia's regulatory and digital transformation priorities:

- Adheres to the **National Center for e-Learning (NCeL)** standards for content delivery and platform functionality.
- Follows **SDAIA** guidelines for data privacy and artificial intelligence applications.
- Incorporates provisions for compliance with **TVTC** training recognition where applicable.

All records, certifications, and educator activity logs are maintained to ensure that Maarif remains audit-ready and aligned with national education reform standards.

2. WHAT THE MTA IS DESIGNED TO ACHIEVE

The **MTA**, developed by Riyada Training, is a centralized, role-sensitive, and performance-linked educator development environment. It is designed to serve not only as a learning platform but also as an institutional tool for talent development, succession planning, instructional consistency, and operational efficiency.

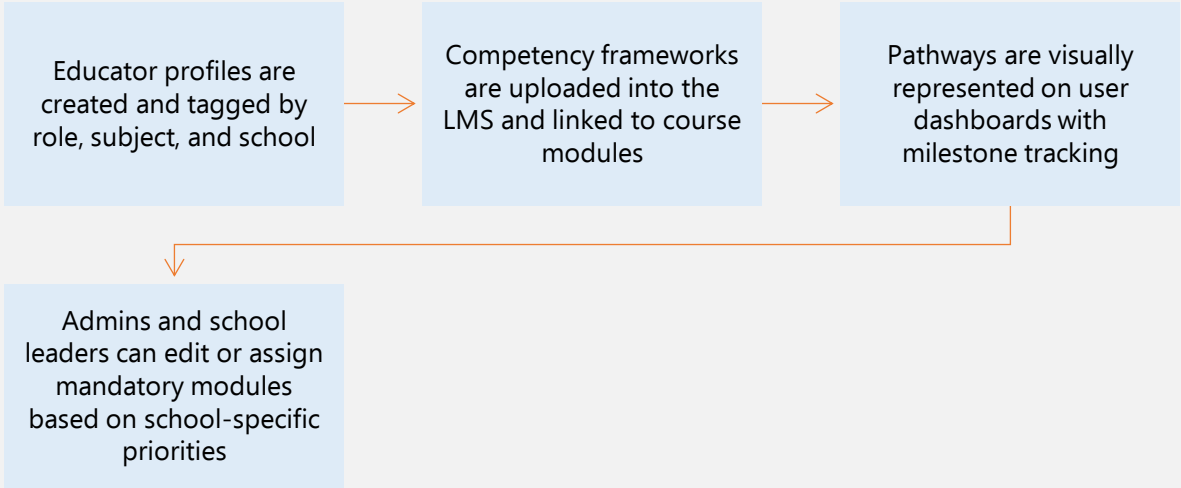
This section outlines the functional outcomes, technical mechanisms, and offline integration points that together create a seamless learning and performance ecosystem for Maarif.

1. Structured, Role-Based Learning Pathways

Every educator — classroom teacher, coordinator, or school leader — is enrolled into a learning pathway that is:

- Aligned with their job role, subject focus, and career progression track
- Mapped to Maarif's internal competency frameworks
- Personalized using certification history, assessment scores, and observed teaching needs

Working in the System



Initial mapping of teacher roles and subject areas may come from HR or academic coordinators, entered via bulk upload or admin portal

2. Internal Trainer Development and Deployment

The platform supports a structured system to:

- Certify selected educators as School-Based Trainers or Regional Instructional Leads
- Assign delivery responsibilities
- Record their training delivery history, feedback, and effectiveness

Working in the System

Trainers are assigned a "trainer" role in the LMS → They complete a mandatory Trainer Development Pathway (a blended mix of pedagogy, delivery, and assessment design) → The system logs sessions delivered, peer reviews, and participant ratings → Trainer dashboards track feedback scores and delivery consistency

I. Trainer nomination and initial performance review may happen offline via school leadership or regional managers

II. Classroom observation rubrics and peer feedback forms (collected offline) can be manually uploaded as evidence

3. Real-Time Progress Visibility for School & Cluster Leaders

School heads and academic leaders can:

- Track training completion, attendance, and competency progression at the school, department, or individual level
- Identify training gaps across teams
- Generate reports for internal and external stakeholders

Working in the System

Multi-level dashboards (school, cluster, HQ) offer drill-down capability → Filters available by competency, department, user group, and training type → Color-coded heatmaps visually highlight performance levels and training saturation

Supplementary documents (e.g., school development plans) can be uploaded and linked to specific training goals for contextual alignment

4. Embedded, Evidence-Based Assessment Mechanisms

Training completion is not based on time spent but on demonstrable learning outcomes via:

- Pre- and post-training quizzes
- Assignments, teaching artefacts, and classroom observation rubrics
- 360° feedback collection from trainers, peers, and self-reflection

Working in the System

Built-in quiz tools, assignment submission portals, and peer review forms are tied to each course/module → Grading rubrics are embedded within each assessment item → Reflection prompts and self-assessments are logged as part of certification validation → Certificates are issued only after all required components are completed

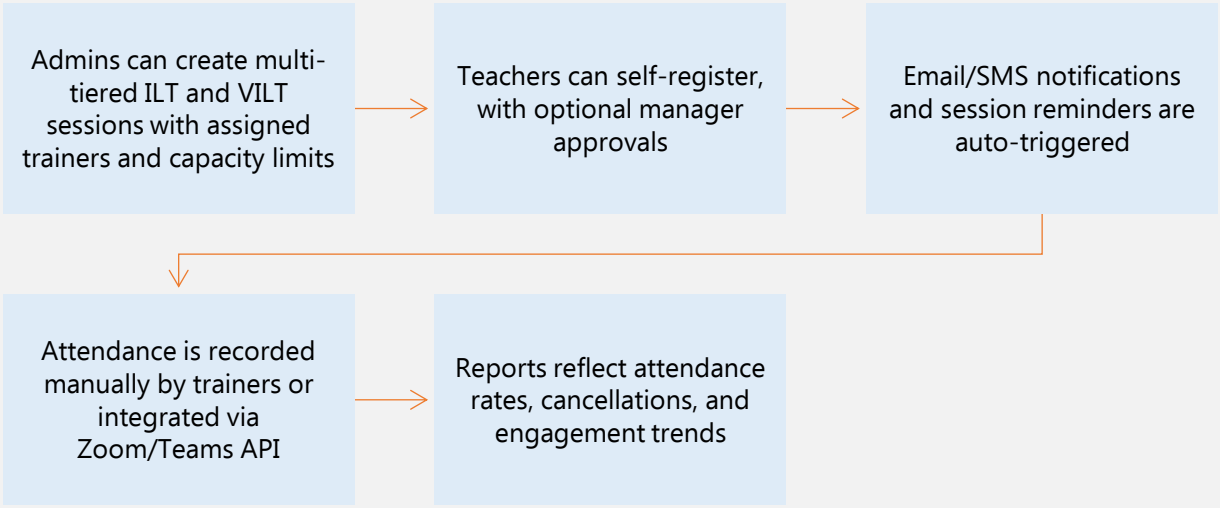
I. Classroom observations and post-training lesson evaluations may be conducted in person by school leaders and uploaded through a guided form in the LMS

II. Video clips of lesson delivery can optionally be uploaded as assessment artefacts

5. Centralized Scheduling, Participation Tracking & Automation

Enables full management of training calendars, attendance, and communication across the network without administrative overload.

Working in the System



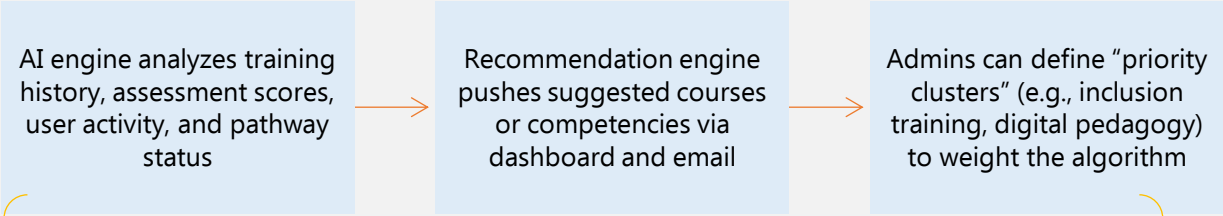
Physical attendance sheets from onsite ILT sessions can be uploaded and verified manually into the LMS

6. Intelligent AI-Driven Learning Suggestions

AI is used to:

- Recommend next courses/modules based on gaps, completed training, and institutional priorities
- Offer learning "nudges" for educators who fall behind or skip core areas
- Tailor tracks for aspiring leaders, subject heads, and newer teachers differently

Working in the System



Individual career aspirations or development goals collected during performance reviews can be manually added to educator profiles to fine-tune recommendations

7. Collaboration Spaces and Resource Hubs

Promotes professional culture through:

- Peer discussion forums
- School-based and subject-specific groups
- Shared file libraries for lesson plans, tools, and templates

Working in the System

Community modules allow role-restricted or open groups → Users can post, reply, share attachments, and engage in topic threads → Content can be tagged by grade level, subject, and outcome area

Original content (e.g., PDFs, scanned rubrics, curated toolkits) can be contributed by users or trainers and uploaded to the shared library

3. TRAINER TERMINOLOGY & HIERARCHY

A Structured, Scalable Model for Internal Educator-Led Training

To ensure sustainable, high-quality professional development, the MTA includes a clearly defined internal trainer model. This model allows Maarif to develop educators within its schools into certified training facilitators — creating a consistent and institutionally embedded approach to staff development.

The terminology, role progression, and hierarchy are designed to reflect Maarif's organizational structure, academic goals, and cultural context, while ensuring clarity in responsibilities and technical activation within the platform.

3.1 Role Definitions

1) School-Based Trainer

An educator designated by school leadership to facilitate professional development sessions within their own school. These trainers:

- Support onboarding and ILT sessions
- Share best practices and mentor peers
- Collect and upload evidence of training effectiveness

System Role

- Assigned "Trainer" permissions scoped to their school
- Can create ILT sessions, manage attendance, and access feedback tools
- Trainer activity tracked via dashboards and integrated with school-level reports

Offline Inputs

- Nominations and peer observation notes submitted by academic coordinators or school heads
- Observational data or hand-marked forms uploaded to the trainer's profile

2) Maarif Certified Trainer

An educator who completes a structured certification pathway and is authorized to deliver training across multiple campuses. These trainers:

- Deliver VILT, ILT, and self-paced course support
- Participate in mentorship programs for new trainers

- Serve as content reviewers or subject specialists where applicable

System Role	Offline Inputs
• Granted cross-school trainer access • Assigned to certified trainer pathway within the LMS • Can create multi-campus sessions and moderate communities of practice	• Training demonstration recordings and peer feedback submitted during certification • Rubric-based evaluations scanned/uploaded into the system

3) Cluster Instructional Lead

A regional-level role responsible for overseeing training quality, scheduling coordination, and trainer development across a group of schools. These individuals:

- Ensure alignment with Maarif's frameworks and standards
- Analyze regional participation, feedback, and certification data
- Support schools in maintaining training delivery continuity

System Role	Offline Inputs
• Granted cluster-level visibility and reporting access • Authorized to support trainers, schedule sessions regionally, and moderate trainer networks • Access to aggregated reports and trainer performance analytics	• Planning documents, training audits, and coordination notes may be logged via backend upload tools

3.2 Trainer Certification Pathway

All internal trainers follow a structured certification process that ensures readiness and quality of delivery:

Nomination

- Based on school leadership recommendation and educator performance
- Entered into the platform by designated admin users

Learning Path Activation

- Completion of digital modules on facilitation, assessment, and delivery
- System tracks course progression, quiz scores, and module engagement

Live/Recorded Session Evaluation

- Trainers co-deliver sessions and receive structured feedback from peers or cluster leads
- Feedback logged via system-integrated evaluation forms

Certification & Role Assignment

- Upon completion of all requirements, trainers are issued digital certificates
- LMS permissions automatically upgraded based on certification status

Ongoing Monitoring & Renewal

- Certification valid for 2 years
- System alerts for renewal requirements (e.g., minimum delivery hours, feedback thresholds)

3.3 Technical Implementation

Function	Platform Feature
Trainer Pathway Activation	LMS-based learning paths with checkpoints, rubrics, and automated certificate issue
Session Scheduling & Delivery	Role-based access to create ILT/VILT sessions, manage attendees, and assign tasks
Feedback & Observation Logging	Embedded forms with auto-collection of participant ratings and peer evaluations
Progress & Quality Dashboards	Dashboards display trainer engagement, feedback scores, delivery reach
Community Collaboration	Trainer forums and resource sharing modules to support continuous improvement

3.4 Institutional Impact

Strengthens Internal Capacity

Reduces long-term dependence on external training providers

Ensures Quality & Consistency

Certification process standardizes delivery practices across campuses

Enables Succession Planning

Tracks trainer contributions and performance for academic leadership readiness

Supports Scalable Delivery

Trainers are empowered to deliver targeted training across regions with minimal admin intervention

Enhances Retention & Recognition

Offers a meaningful career development pathway for high-performing educators

4. USER PERSONAS & DASHBOARDS

Role-Specific Visibility and Action Across the Learning Ecosystem

The MTA platform is designed to provide each user role — from educators to HQ leadership — with a tailored experience. Dashboards are not generic; they are role-aware, data-driven, and aligned to real responsibilities within the school network.

This ensures each user sees what matters to them, takes actions appropriate to their role, and contributes to broader institutional development goals.

1. Persona: Educator (Teacher / Coordinator / New Joiner)

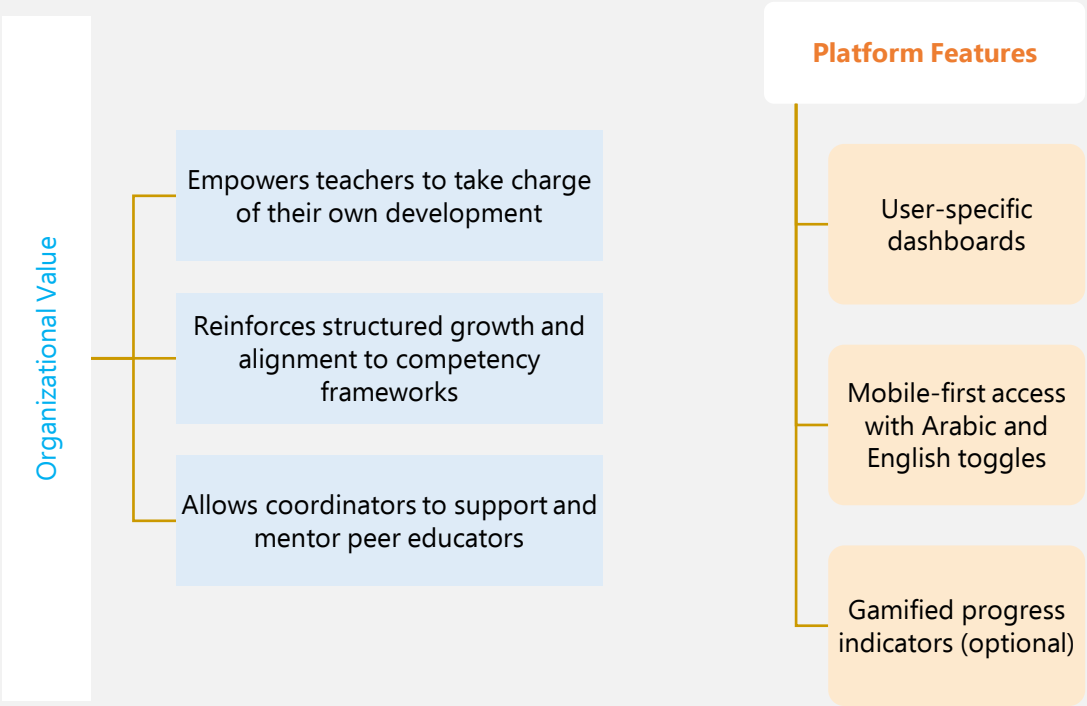
↳Personalized learning pathway based on their role and subject

↳Visual progress tracker showing completed modules, assessments, and certifications

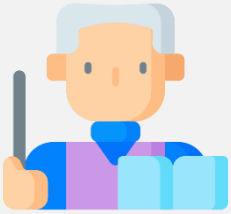
↳Course recommendations based on teaching stage, performance goals, and school priorities

↳ Alerts for required sessions, upcoming ILT/VILT sessions, and nudges for overdue items

↳ Access to peer communities, learning resources, and shared best practices



2. Persona: School-Based Trainer



- Ability to create and manage ILT sessions at their school
- View session feedback, attendance records, and resource libraries
- Track co-facilitation hours, demo session feedback, and upcoming assignments
- Submit offline session observations and peer ratings

Organizational Value

- Role-based permissions for content delivery
- Session quality dashboards (trainer feedback, repeat attendance)
- Trainer resource folder access and contribution rights

Platform Features

- Supports decentralization of training delivery
- Creates institutional memory of who trained whom, with what impact

3. Persona: Principal / School Leader

- Snapshot of training participation at school level
- Competency heatmaps for staff across departments
- View non-completion alerts, overdue training areas, and assessment scores
- Generate reports for academic planning and leadership reviews

Organizational Value

- School-level dashboards with drill-down views
- Attendance, engagement, and performance visualizations
- Alignment indicators to school improvement plans

Platform Features

- Enables school heads to link professional development to teaching quality and appraisals
- Allows leadership to intervene early and recognize emerging talent

4. Persona: Cluster Instructional Lead / Regional Coordinator

- Aggregate view of multiple school dashboards
- Regional participation metrics, trainer activity, feedback summaries
- Planning tools to coordinate VILT sessions and cross-campus ILTs
- Track performance variance between schools

Organizational Value

- Cluster-level dashboard access
- Trainer deployment map and session calendar
- Regional progress tracking widgets

Platform Features

- Ensures consistency of training quality across schools
- Supports leadership decisions based on regional trends

5. Persona: Central Maarif HQ / Academic Leadership

- Network-wide data across all schools, trainers, educators, and clusters
- Talent pipeline analytics, leadership readiness indicators, and training ROI metrics
- Integration reports linked to SIS, HRMS, and appraisal platforms
- Policy compliance status and regulatory alignment dashboards

Organizational Value

- Multi-campus visual analytics
- Custom report generation by region, subject, and user type
- Exportable dashboards for internal strategy or external audit readiness

Platform Features

- Enables strategic decision-making around workforce development
- Aligns professional development data with Maarif's academic roadmap and Vision 2030 initiatives

5. ILT/VILT TRAINER CREDENTIALING & QUALITY ASSURANCE

Ensuring Trainer Quality and Session Relevance Across All Modalities

To maintain instructional integrity and relevance across all Maarif schools, the Academy implements a structured process for verifying trainer credentials and managing quality assurance for Instructor-Led Training (ILT) and Virtual Instructor-Led Training (VILT) sessions.

This process ensures that each training session — whether in-person or virtual — is delivered by educators who are not only certified through the system but also matched to the specific content area, audience profile, and delivery modality.

1. Trainer Credential Verification Process

Before an educator can lead ILT or VILT sessions, the following validation steps must be completed:

Academic & Experience Alignment

- Trainers must have verified subject expertise, grade-level familiarity, or domain-specific instructional experience (e.g., EYFS, digital literacy, Arabic pedagogy).
- Their qualifications and past teaching experience are validated during onboarding or nomination by the school leader or cluster coordinator.

System Support

Trainer profiles in the LMS include academic history, subject focus, and credentials — captured via admin input or teacher-submitted evidence.

Certificates, resumes, or school HR-verification forms are uploaded through the trainer's LMS profile or submitted by cluster leads.

2. Certification Before Facilitation

Trainers must complete the Maarif Academy's internal certification process before they can deliver ILT/VILT sessions:

- Completion of the Trainer Development Pathway (covering pedagogy, adult learning, facilitation strategies, and assessment design)
- Co-delivery requirement, evaluated by a School-Based Trainer or Cluster Lead
- Formal certification issued and recorded in the system with an expiry/renewal cycle (valid for 2 years)

System Support

The LMS restricts scheduling or hosting rights only to certified trainers. Co-delivery session logs and feedback ratings are stored as part of certification records.

3. Session Quality Assurance Workflow

Every ILT or VILT session undergoes quality assurance through a combination of system automation and school-led oversight:

Pre-Session: All sessions must be tagged with:

↳Subject and target audience (e.g., KG Math Teachers, Middle School Arabic)

↳Learning outcomes aligned to Maarif competencies

↳Delivery type (ILT, VILT), format (demo, interactive, case-based)

System Support: Session creation form includes metadata fields to tag each session for reporting and audience matching.

During Session

↳Attendance is tracked live via sign-in (ILT) or system-integrated Zoom/Teams log (VILT)

↳Interactive activities, polls, or shared resources are uploaded by the trainer

System Support
Zoom/Teams API integrations log participant presence automatically. Resource sharing is linked to session library.

Post-Session

↳Participants complete mandatory feedback forms rating:

- Relevance and clarity of the session
- Trainer knowledge and delivery effectiveness
- Practical application of content

↳Trainers receive anonymized summaries of feedback

↳Trainers submit self-reflection logs and participant engagement notes

System Support:
Auto-generated session feedback forms with required questions; aggregated results are pushed to the trainer's dashboard.
Trainer reflection prompts appear post-session in the dashboard for submission.

4. Compliance and Escalation Protocols

- Trainers falling below defined satisfaction thresholds over multiple sessions are automatically flagged for review
- Cluster Instructional Leads or Academic Directors can pause training privileges and request coaching or recertification

Thresholds (e.g., <3.5/5 average rating across 3 sessions) are configurable; automatic flagging and notification triggers are included.

5. Institutional Value and Impact

Quality Assurance Goal	How It's Achieved Through the System
Deliver content with subject and audience relevance	Verified trainer profile and session tagging enforces content-experience alignment
Ensure only qualified trainers deliver sessions	Certification gatekeeping controls and co-delivery evaluation process
Maintain consistent instructional standards	Post-session participant feedback, trainer self-reflection, and periodic review by Cluster Leads
Identify gaps or trainer development needs	Dashboard reports highlight low-performing sessions and engagement variances by topic or trainer cluster
Prevent over-reliance on single trainers	Scheduling limits, trainer deployment logs, and cross-school visibility help distribute facilitation

6. ASSESSMENT & CERTIFICATION

Evidence-Based Validation of Professional Learning Aligned with Maarif Standards

The **MTA** moves beyond attendance-based training models by embedding structured, competency-linked assessments into every professional learning pathway. Certification is awarded only when clear evidence of skill acquisition, reflection, and application has been demonstrated.

This ensures that professional development directly supports teaching quality, classroom outcomes, and broader institutional goals.

1. Standards-Based Assessment Design

Each course or learning module within the Academy is mapped to specific teaching competencies drawn from Maarif's educator development frameworks. These may include:

1) Instructional Planning and Delivery
2) Student Engagement and Differentiation
3) Assessment and Feedback Practices
4) Digital Pedagogy
5) Leadership and Mentorship Capacity

System Implementation

Each training module includes a backend mapping to a specific competency or rubric strand. These tags feed into educator dashboards and certification pathways, allowing leadership to track growth by competency domain.

Offline Support (optional)

School-specific competency frameworks or locally adapted rubrics can be uploaded and attached to training records for contextual alignment.

2. Multi-Layered Assessment Model

The platform supports a layered, evidence-based assessment approach:

Assessment Type	Purpose	System Support
Pre-Training Quiz	Baseline knowledge capture	LMS auto-graded quiz tools with score thresholds
End-of-Module Quiz	Core knowledge validation	Embedded quizzes with randomized questions
Assignments / Projects	Application of concepts to real or simulated scenarios	Assignment upload with rubric-based scoring
Classroom Observation Uploads	Validation of classroom practice post-training	Form for uploading observer notes, videos, or images
Peer Review / Group Work	Collaborative assessment and learning exchange	Peer grading tools; comment threads and scoring integrations
360° Feedback	Holistic feedback from peers, mentors, and self	Pre-built 360° form with role-specific question flows
Self-Reflection Logs	Personal evaluation of progress and challenges	Guided form triggered at module completion

Offline Support

Lesson observation checklists, videos of practice teaching, and other school-based assessments can be manually uploaded and tagged to the relevant training module or certification path.

3. Certification Logic & Issuance

Certification is not automatic. It is based on evidence of performance and reviewed completion of all required learning and assessment components.

- Each certification path defines the minimum criteria: attendance, assignment submission, feedback participation, and score thresholds.
- Certificates are automatically generated only upon meeting the full criteria, digitally signed, and stored in the user's profile.
- Expiry dates and renewal requirements are defined based on the nature of the training.

In the system

Certification rules are configurable by module. Admins can adjust requirements, set validity periods, and track certificate downloads and renewals.

Illustrative Rubric Reference

A sample rubric aligned to Maarif's performance standards (e.g., 4-level scale: Emerging, Developing, Proficient, Exemplary) can be embedded at course level and shared with trainers and reviewers. LMS allows rubric

4. Certification Types

Certification Type	Awarded For	Validity
Completion Certificate	Completion of non-assessed self-paced modules	No expiry
Competency Certificate	Demonstrated ability linked to a specific skill set	2 years
Instructional Leadership Badge	High performance in peer mentoring and training delivery	2 years (renewal)
Maarif Certified Trainer	Completion of full trainer development pathway	2 years (tracked)

5. Organizational Benefits

Performance-Linked Development

Certifications reflect true educator growth and classroom relevance

Credibility & Accountability

All training claims are backed by evidence and can be reviewed by school leaders or external regulators

Appraisal Integration

Certification records can be linked to Maarif's performance management system or HR files

Readiness Indicators

Leadership can use completion and assessment performance to identify promotion or succession candidates

7. GAMIFICATION & INCENTIVES

Driving Motivation, Recognition, and Long-Term Engagement

While structured learning paths and assessments ensure rigor, sustained engagement comes from creating a culture of recognition, progress visibility, and intrinsic motivation. The MTA integrates gamification not as a gimmick, but as a performance-aligned incentive framework.

The platform encourages participation, goal-setting, and peer recognition through meaningful digital incentives that reflect professional growth — and, where appropriate, can contribute to career progression and academic leadership visibility.

1. Gamification Elements in the Platform

Element	Purpose	System Implementation
Achievement Badges	Awarded for completing milestones (e.g., module, track)	Automatically triggered upon completion; visible on user profile and dashboard
Leaderboards	Rankings by school, subject, or region	Configurable by participation, assessment scores, trainer ratings
Points System	Points earned for consistent participation or peer reviews	Points tracked in real time; admin can define point logic per activity
Certificate Wallet	Shows progress toward next tier of certification	Certificate milestones visually represented on dashboard
Learning Streaks	Rewards for consecutive weeks of platform engagement	Optional toggle in user settings; gamified reminder notifications

2. Institutional Credit & Recognition Options

Gamification is linked to real outcomes — not just digital badges. The system allows schools and HQ to define how accumulated progress can be formally recognized:

Examples of Use:

- Recognition in performance reviews (e.g., completing 3 certified pathways = "Ready for Leadership" flag)
- Eligibility for advanced workshops, exclusive events, or academic coaching
- Nomination points for becoming a School-Based Trainer or Cluster Lead
- Teacher spotlight features on school dashboards

In the system

Admins can assign "value" to gamified achievements. These values can be linked to eligibility filters for nomination, visibility, or reporting (e.g., "Show me all teachers with 200+ points AND a VILT badge").

Offline component

Schools can complement this with in-person recognition events, newsletters, and inclusion in leadership planning sessions.

3. School-Level Incentive Integration

The gamification layer can be extended to support school-specific incentive structures — aligned with leadership goals and strategic priorities.

Examples include:

- House/team-based challenges tied to campus goals
- Collaborative project badges (e.g., cross-grade innovation projects)
- Recognition of schools with the highest training engagement or certification completion rates

Platform Capability

Multi-level gamification can be configured to allow for school-based competition, cluster-wide engagement initiatives, or group-wide visibility across Maarif.

4. Optional Alignment with Higher Education or External Credit

For longer-term staff development, select programs within the Academy can be positioned for:

1) Leadership track alignment (e.g., pre-requisites for future academic coordinator roles)
2) Professional credit accumulation toward advanced training programs or CPD hours
3) Recognition by external regulatory or accreditation bodies, if relevant in future phases

This option can be explored in coordination with Maarif's professional development governance body or regulatory liaisons.

5. Organizational Benefits

Sustained Participation

Teachers are encouraged to return, progress, and complete training voluntarily

Healthy Motivation

Leaderboards and progress tracking introduce positive peer engagement without pressure

Strategic Recognition

Points and badges linked to real career opportunities, not symbolic gestures

Leadership Readiness Visibility

High-engagement educators emerge as natural candidates for succession and advancement

8. SHARED RESOURCE LIBRARY & PROFESSIONAL LEARNING COMMUNITIES

Enabling Collaborative Growth, Cross-Campus Innovation, and Scalable Knowledge Assets

One of the most strategic features of the MTA is its built-in framework for continuous knowledge sharing and educator-driven innovation. Beyond structured courses and certifications, the platform enables teachers, trainers, and leaders to engage in ongoing professional dialogue, contribute practical resources, and collaboratively advance Maarif's academic vision.

This is achieved through two core mechanisms:

1. A centralized, searchable resource library
2. A set of interactive professional learning communities

1. Shared Resource Library

The resource library functions as a living repository of teaching aids, training content, and academic references contributed by Maarif educators and the Academy team.

- Lesson plans, activity templates, observation tools, and rubrics
- Training presentations, policy documents, and assessment frameworks
- Research summaries and publications relevant to Maarif's pedagogy priorities
- Archived session recordings, facilitator guides, and reflection prompts

Optional Platform Integrations (Recommended):

- Saudi Digital Library: Integration for Arabic and bilingual academic resources
- JSTOR or ResearchBox: Indexed academic research and best-practice documentation
- Internal Maarif Publications: School-developed case studies, newsletters, or curriculum pilots

System Features

All resources are categorized by subject, grade, user type, and format

Searchable with advanced filters

Uploads are permission-controlled; content moderation enabled

Users can rate, comment, and bookmark items

Offline Integration

Materials developed during cluster meetings, teacher PD events, or school projects can be scanned and uploaded with contextual tags.

2. Professional Learning Communities (PLCs)

The Academy enables formation of school- and subject-specific PLCs that function as digital hubs for continuous peer collaboration.

Types of Communities:

- Subject-based: e.g., Primary Science Teachers, Arabic Literacy Leads
- Role-based: e.g., Academic Coordinators, School-Based Trainers
- Thematic Groups: e.g., Inclusive Classrooms, EdTech Integration, Differentiation Strategies

Community Tools:

- Discussion threads and prompts
- Resource sharing and co-creation areas
- Monthly challenges or inquiry cycles
- Guest speaker recordings and curated reading lists

System Features:

- Role-based access and community enrollment
- Notification preferences and content moderation
- Mobile-accessible forums with bilingual support
- Optional leaderboard for most active contributors

3. Institutional Value of Communities & Library Ecosystem

Strategic Outcome	How It's Supported
Cross-school alignment of pedagogy	Common resources and best practices accessible across all Maarif campuses
Promotion of in-house innovation	Teachers can contribute, refine, and scale ideas beyond their classroom
Encouragement of thought leadership	Active contributors can be recognized as knowledge leaders or cluster mentors
Faster onboarding and content access	New teachers access school-approved materials instantly
Network-wide academic coherence	Shared reference points for rubrics, lesson designs, and assessments

4. Platform Governance & Curation

To ensure high quality and cultural/institutional alignment, the following governance structure is recommended:

- Curated Content Boards at the HQ or cluster level
- Designated Moderators per community with editing privileges
- Quarterly Content Audits to archive outdated materials and promote newer contributions
- Content Tagging Framework aligned to Maarif's curriculum structure and educator competencies

5. Long-Term Impact

- Creates a sustainable institutional memory of what works and why
- Encourages grassroots pedagogical leadership from within schools
- Reduces duplication of effort across campuses
- Builds an R&D-driven mindset among teachers and trainers
- Aligns Maarif's vision of educational excellence with everyday educator practice

9. PLATFORM INTEGRATION & INTEROPERABILITY

SEAMLESS CONNECTIVITY WITH MAARIF'S EXISTING ACADEMIC AND HR SYSTEMS

The MTA is designed to fit within the existing digital ecosystem of Maarif schools — not to replace it or operate in isolation. Its architecture supports secure, standards-based integration with widely used school systems, HR platforms, and data sources to ensure continuity, eliminate duplication, and centralize reporting.

1. KEY INTEGRATION TARGETS

1) Student Information System (SIS) (*Example: PowerSchool*)

What it syncs

Teacher profiles, subject allocations, department associations, school locations

Why it matters

Training assignments can be aligned to actual teaching roles; reduces manual data entry

How it works

APIs allow real-time or scheduled data pulls; no CSV handling required

2) Human Resource Management System (HRMS)

What it syncs

Employment records, role changes, transfers, evaluation results

Why it matters

Training progress can feed into appraisals; role-based access is dynamically updated

How it works

OAuth-secured API integrations with read/write permissions for defined data layers

3) Performance Management & Appraisal Tools

What it syncs

Competency achievements, certification records, 360° feedback summaries

Why it matters

HR and academic leadership get a holistic view of staff development progress

How it works

Exportable data structures compatible with most PMS tools; custom API connectors available

4) 4. Assessment & Feedback Tools

What it syncs

Post-training assessments, classroom observation reports, reflection logs

Why it matters

Evidence of application is consolidated for each teacher; feedback loops stay visible

How it works

Embedded assessment engines feed directly into the LMS; external tools can push results via plugins or integrations

2. Single Sign-On (SSO) Compatibility

To improve usability and streamline access, the Academy supports SSO integration through:

- Azure Active Directory (AAD)
- Google Workspace for Education
- SAML 2.0-based Identity Providers

This ensures educators log in once and access all systems securely, without the need for multiple credentials.

3. Data Privacy & Integration Governance

- All integrations follow Saudi data compliance laws, including SDAIA mandates
- Role-based access rules apply across systems — ensuring data visibility matches organizational hierarchies
- All data transfers are encrypted, logged, and version-controlled
- School leaders can monitor what data flows into the system and what can be exported back

4. Organizational Benefits of Seamless Interoperability

Challenge	How Integration Solves It
Duplication of teacher records	Auto-sync from PowerSchool or HR system eliminates redundant data entry
Lack of visibility into performance	Training certifications appear directly in appraisal and promotion workflows
Manual reporting and data silos	Central dashboards aggregate LMS + SIS/HRMS performance indicators
Platform fatigue and login friction	Single Sign-On (SSO) eliminates multiple credentials and improves engagement

5. Custom Integration Roadmap (If Needed)

While most core integrations can be activated using existing connectors and APIs, the platform allows for:

- Custom workflow triggers (e.g., auto-enroll new hires into onboarding pathway)
- Integration with future regulatory portals (e.g., if required by TVTC, NCeL, or GOSI for audit)
- ERP-level integration hooks for deeper institutional adoption

10. MULTILINGUAL SUPPORT & ACCESSIBILITY

Enabling Inclusive Access Across Maarif's Diverse Educator Community

Given Maarif's bilingual instructional environment and educator diversity, the platform has been built with full multilingual support and inclusive accessibility standards in mind. The goal is to ensure every educator — regardless of language preference or ability — can engage with training content, navigate the platform with ease, and participate fully in their development journey.

1. Dual-Language Interface: Arabic & English

The MTA provides a **fully mirrored experience** in both Arabic and English — not just translation overlays. This includes:

Platform-Level Multilingual Support:

- Entire user interface (menus, dashboards, buttons, tooltips)
- Course navigation, assessments, certificates
- Calendar, session registration, reminders, and notifications

Content-Level Multilingual Support:

- ILT/VILT session descriptions and materials
- Self-paced courses and training modules
- Certification pathways, rubrics, and resource libraries
- Trainer and participant feedback forms

System Features

- Users can select their preferred language upon first login or switch anytime from the top navigation bar
- Admins can upload training content in either language; the system tags and organizes bilingual versions as equivalent
- Session setup includes a required "language of delivery" field to ensure appropriate visibility to users

2. Multilingual Onboarding, Support & Documentation

- All onboarding guides, tutorial videos, walkthroughs, and helpdesk documentation are made available in Arabic and English
- Virtual orientation sessions can be offered in both languages
- Technical and academic support tickets can be submitted in either language

> **Organizational Option**
>
> Maarif can choose to segment onboarding by school or user group, offering Arabic-first or English-first sessions depending on teacher profiles.

3. Accessibility Standards & Inclusive Design

The platform complies with international and regional digital accessibility guidelines, ensuring usability for educators with diverse needs.

Key Accessibility Features:

- Responsive Design: Fully accessible via desktop, tablet, and mobile
- Font & Color Contrast Controls: Compliant with WCAG AA standards
- Screen Reader Support: For visually impaired users
- Keyboard Navigation: Platform functions accessible via keyboard-only workflows
- Clear Language & Icons: Intuitive, non-technical interface labels

> **Inclusive Design Note**
>
> All content creators and trainer contributors will be provided with a short accessibility guideline sheet to ensure that materials (PDFs, images, videos) are compatible with assistive technologies.

4. Organizational Benefits

Inclusivity Goal	How the Platform Supports It
Cater to Arabic-first and English-first educators	Dual-language interface and mirrored course content
Ensure all educators can access and complete training	Bilingual support documentation, session recordings, and 24/7 helpdesk options
Maintain compliance with digital inclusion standards	WCAG-compliant features and instructional accessibility design templates
Support region-specific onboarding	Orientation materials customizable per cluster or language group

11. SAUDI COMPLIANCE & DATA GOVERNANCE

Built to Meet National Education, Data, and Professional Standards

The MTA platform is designed from the ground up to comply with the Kingdom of Saudi Arabia's evolving regulatory, data privacy, and professional development frameworks. This includes alignment with government bodies such as:

- SDAIA (Saudi Data and Artificial Intelligence Authority)
- National Center for e-Learning (NCeL)
- Technical and Vocational Training Corporation (TVTC) — where applicable for certification frameworks

This ensures that Maarif remains compliant, audit-ready, and fully aligned with national education modernization goals.

1. Data Privacy & Security Standards

Key Commitments:

- All user data is hosted on servers within the Kingdom (or compliant KSA-approved cloud infrastructure)
- Role-based access controls ensure data visibility is restricted to appropriate school or cluster leaders
- Personally identifiable data (teacher records, feedback, assessments) is encrypted at rest and in transit
- System logs all data access for audit trails and accountability

Platform Implementation

The system uses TLS encryption, MFA support, GDPR-modeled access logs, and configurable data retention rules to meet current SDAIA and MoE data protection directives.

2. Alignment with NCeL & National eLearning Frameworks

The Academy aligns with the **National eLearning Standards** outlined by NCeL, including:

- Structured course design with clear objectives and mapped competencies
- Evidence-based certification pathways
- Platform analytics for learner progress and institutional visibility
- Bilingual access and digital inclusion compliance
- Interoperability for audit and national reporting alignment

Optional Extension

Should Maarif wish to register certain courses with national eLearning platforms in the future, the Academy's modules are SCORM/xAPI compatible for cross-system submissions.

3. TVTC Alignment (Where Applicable)

For training pathways that may eventually qualify as vocational or professional development under TVTC:

- Competency mapping is documented at course level
- Trainer credentials are trackable and exportable
- Session logs, feedback, and certification records are timestamped and report-ready
- Rubric-aligned evaluations and observed teaching assessments are logged in a TVTC-friendly format

Institutional Note

While current general educator development may not fall under TVTC, the platform allows modular activation of TVTC-compliant reporting templates and workflows should Maarif choose to pursue that route in the future.

4. Institutional Compliance Dashboard

Maarif HQ and designated administrators have access to a compliance view that includes:

- Overview of completed vs. pending certifications per school/cluster
- Course audit logs and historical version control
- Exportable datasets for MoE inspection, internal audits, or policy alignment
- Session history by trainer, with delivery evidence and feedback attached

Dashboard access is role-controlled, ensuring only compliance or HQ teams can access this level of detail.

5. Future Readiness

The platform is built to support future government-led initiatives such as:

- Centralized national educator registries
- Blockchain-based digital credentialing
- AI-based talent benchmarking and teacher quality evaluations

This ensures that Maarif's investment is not only compliant today, but **future-proofed** for upcoming regulatory innovations.
